## Abstract

The lives of people in tribal areas face poverty and exploitation. They are both economically and technologically. They are illiterate. In their indigenous life, they largely revolve around collecting and recycling. In agriculture, indigenous peoples mainly practice shifting farming. Tribal agriculture is primitive and unproductive. Tribal agriculture is characterized by poor land use, poor cultivation techniques and low investment in crop production. A study of agriculture in tribal areas found that tribal farmers were using primitive farming techniques, but lacked precise and detailed knowledge. They had not enough knowledge about the agricultural techniques commonly practiced in other places.

**Keywords:** Indigenous life, poverty, exploitation, shifting agriculture.

## INTRODUCTION:

The tribe population is quite large, as the progress of the country is linked to the development of the tribe. As we know, the tribe is made up of hunter-gatherer and agricultural tribes. All tribal knowledge is considered an important source of information regarding the
